

# Eliminate Cloud Risk. Automate Compliance.

InsightCloudSec is a cloud risk and compliance management platform. It enables organizations to accelerate cloud adoption with continuous security and compliance throughout the entire software development lifecycle.

This platform provides a comprehensive solution to manage and mitigate risk across even the most complex cloud environments. InsightCloudSec detects risk signals in real time and in complete context, allowing your teams to focus on the issues that present the most risk to your business.

InsightCloudSec allows your teams to establish and enforce standards and policies around cloud access and resource configuration, whether they're based on common industry frameworks or customized to specific business needs. The platform provides agentless, real-time visibility and native automation, so you can continuously track compliance across your organization and automatically enforce policies whenever compliance drift occurs.

## Context-Driven Risk Assessment

Simplify cloud risk assessment with rich contextual insight into every layer of your environment, so you can understand and prioritize risk based on potential impact and exploitability.

## Cloud Security Posture Management (CSPM)

Gain real-time visibility into every resource and service running across your multi-cloud environments to continuously assess your security posture. With standardized terminology, security teams can build policies and checks that apply across cloud platforms and Kubernetes clusters, driving improved efficiency by simplifying inventory and policy management.

**We trust the data that InsightCloudSec is providing. That confidence has in turn given the account owners across Maximus and our different business divisions more confidence in the recommendations that we're presenting them.**

Guy Bridgman, Director of the Cloud Center of Excellence (CCoE) at Maximus

## Agentless Vulnerability Management

Automatically analyze cloud workloads and container images upon deployment, gain detailed intelligence and remediation guidance for known vulnerabilities, and revalidate running hosts against the newest vulnerability data to detect and protect against drift.

## Cloud Infrastructure Entitlements Management (CIEM)

Adopt a least-privilege access model by proactively analyzing cloud environments for excessive entitlements at scale. This solution breaks down complex, multi-tiered IAM policies and analyzes them within the context of your environment to simplify fixing excessive entitlements.

## Automated Cloud Compliance

Enforce organizational standards without the need for human intervention with native, no-code automation. Streamline the remediation process, and take action immediately whenever an organizational policy has been violated or compliance drift is detected.

## Cloud Detection and Response (CDR)

Consolidate native and third-party runtime threat detections for faster detection and analysis of potential cloud threats. The solution collects cloud events, alerts, and threat intelligence feeds from associated services like AWS GuardDuty, and provides frictionless workflow integrations to streamline and accelerate response.

## Infrastructure as Code (IaC) Security

Evaluate risk of infrastructure-as-code templates against an industry-leading number of security checks for a consistent definition of done, and prevent misconfigurations or policy violations early in the development process.

## Customers Love And Trust InsightCloudSec

**Discover**  **Fannie Mae**  **Discovery**  **AUTODESK** 

## Supported Platforms:

- Amazon AWS
- Microsoft Azure
- Google (GCP)
- Alibaba
- Oracle (OCI)
- Kubernetes

## Key Integrations:

- Slack
- Microsoft Teams
- Jira
- ServiceNow
- PagerDuty
- InsightVM
- InsightIDR
- Splunk
- Tenable
- Qualys
- CrowdStrike
- SentinelOne

## Compliance Packs:

- NIST
- CIS Benchmarks
- CSA CCM
- ISO 27001
- HIPAA
- HITRUST
- PCI DSS
- SOC 2
- FedRAMP
- GDPR
- And many more...
