

Insight Agent

The universal Insight Agent is lightweight software you can install on any asset—in the cloud or on-premises—to collect data from across your IT environment. With unified data collection, security, IT, and DevOps teams can collaborate effectively to monitor and analyze their environments.

Rapid7 Insight Platform

InsightVM

Vulnerability Management

- Live view into your exposures
- Asset security for remote workers
- Visibility into ephemeral assets

InsightIDR

Cloud SIEM

- Real-time, deceptive detections
- Endpoint investigation and hunting
- File integrity monitoring
- Automatically contain compromised users and assets

InsightOps

Log Management

- Real-time log centralization
- Alerts for critical events
- Live asset analysis

KEY BENEFITS

1

Simple Installation

Install once using universal installers for Linux, Mac, and Windows.

2

Real-time Monitoring

View endpoint data, including: detailed asset information, Windows registry information, file version and package information, running processes, authentication information, local security and event logs, and more.

3

One Agent to Rule Them All

Leverage a single endpoint agent for vulnerability management, endpoint threat detection, and log management.

Small footprint. Big insights.

InsightVM & InsightIDR	Linux	Mac	Windows
Average daily network data transfer	< 5 MB*	< 5 MB*	< 70 MB* for workstations and servers
Footprint	< 500 MB	< 500 MB	< 500 MB
RAM**	< 200 MB	< 200 MB	< 400 MB
CPU	6%-8%	6%-8%	6%-8%

Learn more about the products powered by the Insight Agent:

www.rapid7.com/InsightVM | www.rapid7.com/InsightIDR | www.rapid7.com/InsightOps

*InsightOps data transfer is dependent on log configuration

**These are only approximations/ranges and actual numbers may vary

**For single product use (InsightVM and InsightIDR only) numbers would be approximately 50% lower.
